1. An underground munitions dump is built into a hill near a railway siding 3.5 km. from the Patka station, which is on the Székesfehérvár-Bicske railway. The munitions dump was constructed in 1949 and supplies with munitions the Hungarian garrisons at Veszprém, Székesfehérvár, Várpalota, and Hajmáskér. Russian soldiers unload the munitions trains. The dump itself is guarded by the Russians, while the neighborhood is closely watched by the AVH.
2. An average of 12 carloads of ammunition were delivered here daily from 10-24 July 1951. Usually, however, a daily average of four cars arrive through Bicske and Székesfehérvár. In July 1951, for example, 120 cars were delivered in all at the dump. The deliveries include all sorts of ammunition for infantry and artillery. At the end of July, principally small bombs and Minengeschosse (sic) for the air force were delivered. Every item which is taken from the dump is replaced.
3. A new gun, called the Nimrod gun, is being produced in the Byutas és Féraru Factory in Nagytetyen. It is an automatic, 12-round gun which has the same caliber as the Levente gun (sic). This gun is accurate up to 200 m.
4. Parts for the new gun are delivered from the Rákosi Művek (former Manfred Weiss Works) in Csepel.
5. At the beginning of June 1951, 500 of the new guns were ordered for the Budapest police. All the Hungarian police are to be equipped with the Nimrod guns.
6. This factory at Nagytetyen produces ammunition as well as guns. There has been at least one fatal accident there. The factory is closely guarded by units of the AVH. They keep watch without and within the wall that surrounds the factory.
